This report contains tourism-related data on local authorities in Wales for the period 2011-2019. Please also refer to the four Wales regional tourism profiles for further comparative information. Following the advice of the Office for National Statistics, in order to maximise statistical robustness, figures are presented as annual averages over 3 years. 2019 is the most recent year for which we have detailed data at this level of geography and so the profiles contain the most up-to-date information currently available. The profiles contain tables on domestic overnight, domestic day visitors, and international overnight visitors.

Tourism profile – Wales Local Authorities

Summary of tourism trends for local authorities in Wales 2011 – 2019

Map of Welsh local authorities

Map of regions of Wales

Introduction

The tables in this profile contain tourism-related data for the 22 Local Authorities in Wales during the period 2011 - 2019. The data is sorted alphabetically by local authority. Please note that the data is presented using 3-year rolling averages, as the sample sizes of the various tourism surveys used to compile this profile would be too small to give statistically reliable data for each local authority on an annual basis.

The profile contains summary tables on domestic overnight and domestic day visitors to Wales. In order to provide context to the data for the individual Welsh local authorities, we have also provided data for the overall GB-level, Wales-level and the four regions of Wales shown in the map above. Please refer also to the four Wales regional tourism profiles published along with this local authority profile for comparative information on a Wales regional basis.

GB Domestic Visitors to Wales

[Great Britain Tourism Survey](#)

The GBTS is a continuous survey of the GB population that is the source of official statistics measuring the volume and value of overnight trips taken by British residents throughout Britain.

International Visitors to Wales

[International Passenger Survey](#)

The International Passenger Survey (IPS) is used to produce official statistics relating to international visitors to the UK and Wales. Around 250,000 interviews per year are conducted at ports and airports with those entering or leaving the country, and the Office for National Statistics (ONS) uses data from around 45,000 of these to estimate figures for international visitors. ([Further information](#))

The ONS have responded to concerns that visitors from some countries may be under-represented in the estimates, notably China as well as other countries in south-east Asia, and have developed a new adjustment method, updating their weightings. The new method was developed using Home Office landing card data for different countries to understand where there was under or over representation in the previous estimates.

On 22 May 2020 the ONS released final 2019 estimates of trips, nights and spend in Wales based on the new method as well as revised estimates for trips, nights and spend for 2009-2018. Estimates prior to 2009 remain unchanged.

[A summary of the new method developed by the ONS is available here.](#)

¹ In 2017 the estimated number of international visitor nights spent in Mid Wales showed a substantial uplift compared to the previous year, which was not seen elsewhere in Wales. This was due to a large increase in the average length of trip in Ceredigion in 2017, which did not persist in 2018 and may be considered an outlier year.

Sources used in this profile

The surveys and other sources used in this profile are Great Britain Tourism Survey (GBTS), Great Britain Day Visitor Survey (GBDVS) and International Passenger Survey (IPS).

Great Britain Tourism Survey

The Great Britain Tourism Survey (GBTS), is a national continuous consumer survey measuring the volume and value of overnight trips taken by residents of Great Britain, providing volumes, values and characteristics of domestic tourism within Great Britain. The survey measures participation in overnight tourism trips taken to destinations in GB by residents of England, Scotland and Wales.

GBTS replaced the previous United Kingdom Tourism Survey (UKTS) which also included trips to Northern Ireland running from 1989 until 2010 inclusive. GBTS is jointly sponsored by VisitEngland, VisitScotland and Visit Wales (the Tourism Department of the Welsh Government).

The GBTS survey is conducted continuously throughout the year, using face-to-face interviewing, as part of the Kantar in-home omnibus surveys. Weekly omnibus surveys are conducted with a representative sample of 2,000 adults aged 16 and over within GB. Respondents are asked whether they have taken trips in the UK in the previous four calendar weeks that involved at least one night away from home.

When such trips are reported, further questions are asked about a maximum of three trips - the most recent three trips - with a core set of questions for all three trips and additional questions for the most recent trip.

The results are reported in terms of total GB population values. Therefore, the data are weighted to correct for differences between the sample distribution and that of the population and to gross the sample values up to the population.

International Passenger Survey

The IPS survey is undertaken by the Office for National Statistics and collects information about passengers entering and leaving the UK and has been running continuously since 1961.

The IPS conducts between 700,000 and 800,000 interviews a year of which over 250,000 are used to produce estimates of overseas travel and tourism.

Interviews are carried out at all major airports and sea routes, at Eurostar terminals and on Eurotunnel shuttle trains.

Great Britain Day Visits Survey

GBDVS is the source of official statistics on day visits by British residents to destinations throughout Britain.

The survey is undertaken jointly with VisitWales, VisitEngland and VisitScotland. Its aim is to measure the volume, value and profile of Tourism Day Visits taken by GB residents to destinations in GB.

Fieldwork commenced at the beginning of 2011, and the 2019 survey took the form of some 35,000 online interviews throughout Britain. The Wales resident sample was boosted to approximately 5,000 in order to permit more detailed secondary analysis.

GBDVS 2019 includes estimates of the total volume and expenditure of Tourism Day Visits and the main results regarding activities undertaken, destination type, transport types used, money spent during visits and the profile of visitors. Results are provided at an overall GB level and individually for visits taken to destinations in England, Scotland and Wales. Wherever possible (sample sizes permitting), results are also provided at a regional level.

GBDVS 2019 was undertaken using an online methodology with a total of 35,746 interviews conducted with adults aged 16 and over who were resident in England, Scotland and Wales during 52 weekly survey waves. Survey respondents were selected from an online panel with demographic quotas based on age, gender, working status, socio-economic status and area of residence applied in every survey wave to increase the representativeness of the achieved sample.
